Asset Management and Financial Forecasting: Optimizing Asset Life for Sustained Operations

Training for California Drinking Water Operators

1:00 pm – 4:00 pm VIRTUAL

With limited revenues, aging infrastructure, and regulatory obligations to meet, a comprehensive approach to managing your system is vital. You may not be sure which asset(s) to replace when funds are limited, and need help anticipating costs of future demand. This training will teach you how to: develop an inventory of utility components; identify critical assets for sustained operations; make decisions about how to operate, repair, and replace those assets; and set goals for level of service at a sustainable cost.

Presenters: Maureen Kerner, Associate Director, Environmental Finance Center at Sacramento State; Ella Ban, Environmental Specialist, Environmental Finance Center at Sacramento State

CEU credits may be available to California drinking water Operators
