## Drought Planning: Understanding the Impact of SB 552 on Small Water Supplies

### Training for California Drinking Water Operators

9:00 am - 12:00 pm VIRTUAL

With limited financial and technical resources, small water systems are particularly vulnerable to drought conditions. As longer and more frequent droughts become the norm, your system needs to be prepared. Senate Bill 552 introduces new requirements to help small suppliers be better prepared for future water use. This workshop will discuss key points of interest for small water operators who want to be proactive about drought planning.

**Presenters:** Erik Porse, Research Engineer, Environmental Finance Center at Sacramento State & UCLA Institute of the Environment and Sustainability; Ella Ban, Environmental Specialist, Environmental Finance Center at Sacramento State

*CEU credits are available for California Water Operators.*
